Introduction:

ISO 27001 is an international standard published by the International Standardization Organization (ISO), which describes how to manage information security in a company. The last revision of this standard was published in 2013, and its complete certification is currently ISO/IEC 27001:2013. The first revision of the standard was published in 2005, and was developed based on the British standard BS 7799-2.

ISO 27001 can be implemented in any kind of organization, profit or non-profit, private, small or large government-owned. It was written by the world's best experts in the field of information security and provides methodologies for the implementation of information security management in an organization. It also allows companies to get certified, which means that an independent certification body has confirmed that an organization has implemented information security compliant with ISO 27001.

Learning Objectives:

1. Understand the principles, concepts and requirements of ISO/IEC 27001:2013.
2. Identify how to develop an ISMS.
3. Understand ISO 27001:2013 Annex A.

Training:

- Course Type: Foundation.
- Certification Code: I27001F.

Target Audience:

Those who need to know what ISO 27000 is all about.

Certification Exam:

- Format: Multiple choice.
- Questions: 40.
- Language: English/Spanish.
- Pass Score: 24/40 or 60 %.
- Duration: 60 minutes maximum.
- Open book: No.
- Delivery: This examination is available online.
- Supervised: It will be at the Partner's discretion.

Prerequisites:

There are no formal prerequisites for this certification.
